Release Notes – May 26, 2021

Issues Addressed

- When creating a patient, it was possible to add a future date of birth (DOB), which caused the age to show as a negative number. A future dated DOB can no longer be entered.

- When multiple ICD code concepts were added to a patient's problem list and the secondary code (or "buddy" code) was marked inactive, resolved, or deleted, the codes would not retain the new status and in some cases add additional entries for the secondary code. This has been corrected and the codes can be marked inactive, resolved, or deleted.

- Some Advanced Search queries using date selection criteria to search on Patient Visits caused an internal error and no results were returned. A fix has been made to address this issue.

Feature Enhancements

2021 ACO Data Collection Support

GEHRIMED has added the following data collection measures for use in ACO workflows.

- Diabetes: Hemoglobin A1c (HbA1c) Poor Control (>9%) for patients aged 18-65 who are not receiving hospice services

- Controlling High Blood Pressure for patients aged 18-65 who are not receiving hospice services

- Preventive Care and Screening: Screening for Clinical Depression and Follow-Up Plan
